

About VendTek

VendTek Systems Inc. ("VendTek") develops and licenses transaction automation system software and supporting technologies focusing primarily in the prepaid telecom and financial services industries. VendTek's products provide infrastructure to service providers, retailers and retail distributors allowing them to distribute electronic products and services with increased efficiency.

VendTek's foremost product is its proprietary eFresh™ technology. eFresh has been deployed in North America, Europe, Asia, the Middle East and Africa. The first system was deployed in 1999 making VendTek one of the world's innovators and leaders in this business. VendTek also has extensive experience in self-serve and vending systems, smart cards and payment technologies.

VendTek was founded in 1988 and became a public company listed in Canada in 1999. VendTek has an international presence with offices in Canada, China and the U.A.E and customers in the Americas, Asia, Europe, the Middle East and Africa.

About eFresh

VendTek first introduced eFresh in 1999. Since then it has been continuously developed for new customers, new markets and new applications. Today eFresh is operating in Canada, the USA, China, the United Arab Emirates, and Sudan.

eFresh XP

eFresh™ sells prepaid products in real-time through client terminals connecting to a central server containing the prepaid (PIN) inventory. The consumer receives a printed receipt, which is their prepaid voucher providing all the information they need to reload their account or service.

eFresh XP turns your computer into a POS terminal for selling prepaid products. Any Windows PC can be used to connect with the eFresh Server using your current Internet connection or a dial up modem. Any Windows printer can be used for printing vouchers and reports including a PC receipt printers.

Features

- Supports multiple languages. Currently: English, French, Spanish and Chinese.
- Access management via user accounts and passwords controlled at the client
- Barcode printing
- Full voucher layout from the server
- Terminal side reports: Clerk, Detailed, End of Day, Summary

- Use standard desktop printers, POS receipt printers or even no printer at all

Installation and Setup

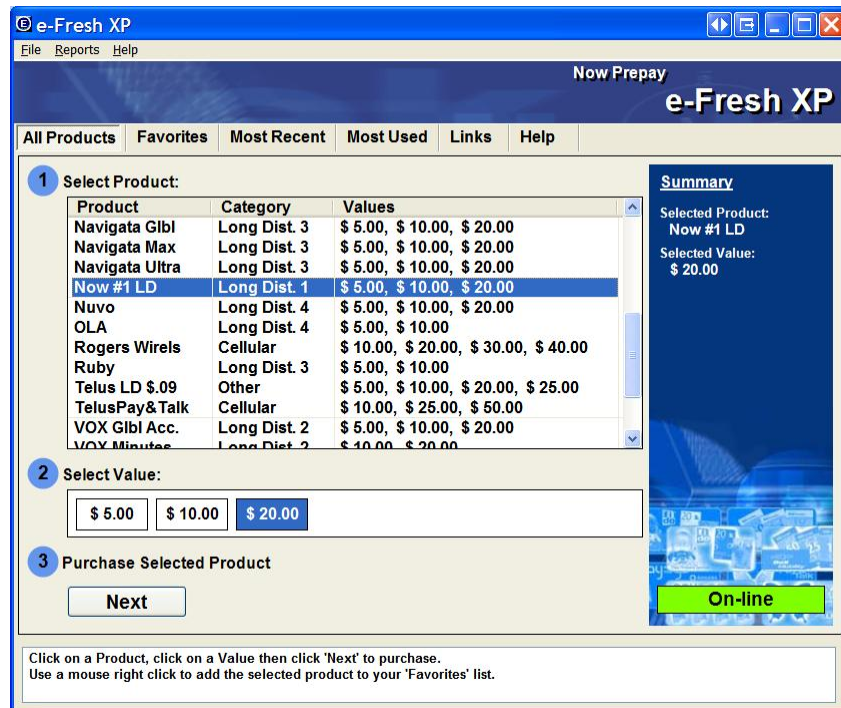

Installation and setup of the application is easy

- Ensure your Windows updates are current
- If your PC does not already have the Microsoft .NET framework, install it using Windows Update (Select Optional Software Updates)
- Run the setup.exe provided

When first run, the application will be in Off-line demo mode. This mode allows you to evaluate the application without connection to an eFresh Server and buying products.

Configuration of the application is done in the File, Setup menu.

- Set printers for vouchers and reports
- Set connection to TCP/IP Internet or Modem
- Authenticate with the eFresh Server to enter On-line mode so you can purchase prepaid products
- Customize your voucher, if desired.

System Requirements

Hardware	Any typical Windows computer with current Windows updates and the Microsoft .NET framework installed
Operating System	Microsoft Windows 98 or better, Tested on Windows 98, 2000, XP, 2003 and Vista
Communications	TCP/IP over the Internet or Dial-up Modem
Printers	Standard desktop printer, POS receipt printer, or even just view vouchers on display
On-line Purchases	Requires a merchant account, terminal ID and UTK provided by your eFresh Network Provider

Selling

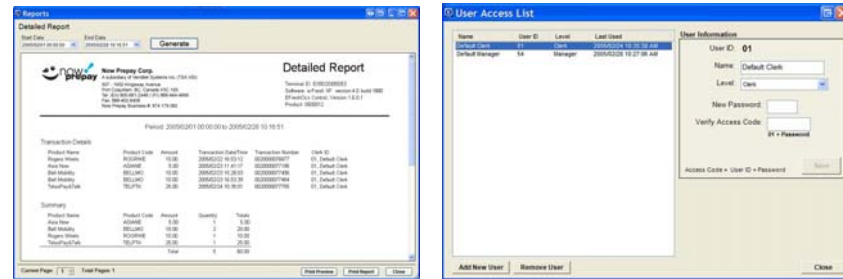

Purchasing a product on the eFresh system is easy. The diagrams on the right hand side of the page illustrate the process.

It is simple and requires no training. The clerk selects the product that the customers wish to purchase, the application then connects automatically to the eFresh Server to retrieve the PIN and finally the voucher is printed by the terminal.

Reporting and Management

Multiple reports can be run including the following:

- Sales Clerk
- Detailed
- End of Day
- Summary

Passwords can be controlled by the manager to create multiple clerk and manager access codes. Reports can then be created to show each clerk's activity.

Customizing

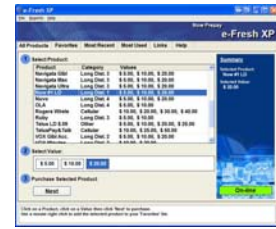

The eFresh XP interface can be changed easily using the included XML file. This allows you to customize the application for your market and customer.

The arrows on the images below highlight a few of the customizable items which include:

- Title bar text, including hiding the title bar completely
- Help text at bottom of screen, including hiding this text box completely
- Text on all tabs, and hiding tabs that you do not wish to display
- Links and link description on Links tab
- Help and contact information on the Help tab
- Default eFresh Server connection details
- Default product file
- Report graphic header

Select product and value

Enter a user's 5 digit password

The transaction is processed and the voucher is printed in receipt or letter size.
