

## About VendTek

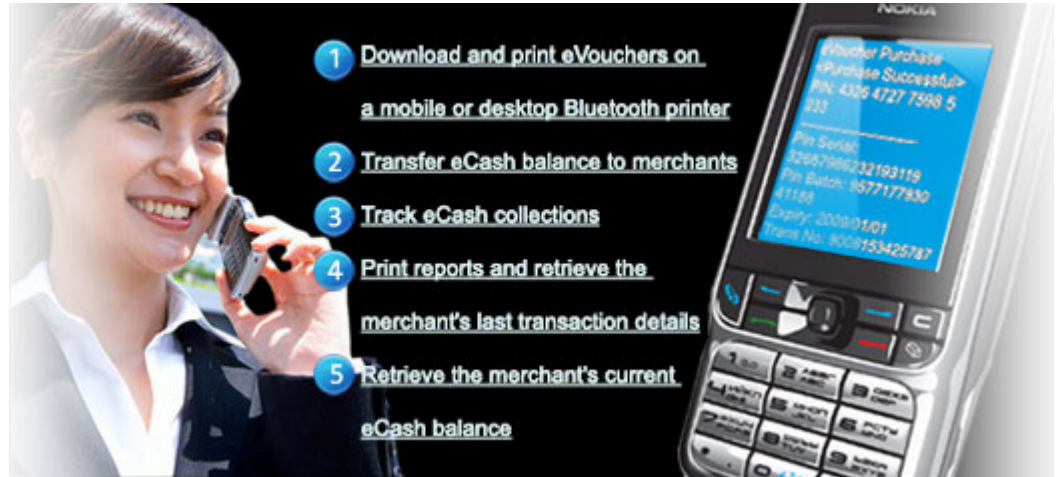

VendTek Systems Inc. ("VendTek") develops and licenses transaction automation system software and supporting technologies focusing primarily in the prepaid telecom and financial services industries. VendTek's products provide infrastructure to service providers, retailers and retail distributors allowing them to distribute electronic products and services with increased efficiency.

VendTek's foremost product is its proprietary eFresh™ technology. eFresh has been deployed in North America, Europe, Asia, the Middle East and Africa. The first system was deployed in 1999 making VendTek one of the world's innovators and leaders in this business. VendTek also has extensive experience in self-serve and vending systems, smart cards and payment technologies.

VendTek was founded in 1988 and became a public company listed in Canada in 1999. VendTek has an international presence with offices in Canada, China and the U.A.E and customers in the Americas, Asia, Europe, the Middle East and Africa.

## About eFresh

VendTek first introduced eFresh in 1999. Since then it has been continuously developed for new customers, new markets and new applications. Today eFresh is operating in Canada, the USA, China, the United Arab Emirates, and Sudan.

### What is eFresh?

eFresh is software which allows products and services to be distributed and sold electronically as opposed to physically. The eFresh software resides on a central server which you operate and on electronic (POS) terminals in retail locations. The combination of the central eFresh server and POS terminals with eFresh software creates a secure electronic distribution network.

eFresh creates an efficient and convenient system for distribution and inventory management which can create substantial savings as well as a new business opportunity to generate sustainable recurring revenues.

### What is eFresh Mobile?

eFresh Mobile is a java application that can be deployed on phones with Java mobile version 1.4.2 or higher. A combination of eFresh Mobile with a Bluetooth printer provides the same functionality as a POS terminal for selling multiple prepaid products at much lower cost. The application communicates with the eFresh server via GPRS.

A simple menu interface supports the following functions:

- Download and print eVouchers on a mobile or desktop Bluetooth printer.
- Transfer eCash balance to merchants.
- Track eCash collections.
- Print reports and retrieve the merchant's last transaction details.
- Retrieve the merchant's current eCash balance.

The results of each request are presented in real time on the mobile phone screen.

### How Does eFresh Mobile Work?

The Merchant is assigned a unique merchant ID and terminal ID along with a password. The user downloads the java application from the Internet. After the application is installed, the setup option is used to enter the IP address of the eFresh server along with the assigned merchant and terminal ID's.

The setup option also allows for configuring the Bluetooth printer, testing the data connection as well as tracking transaction reference ID and eVoucher receipt numbers.

Each time the application starts the user must enter the password. Then simply selecting the desired function from the main menu will present the entry screen for that function. Follow the prompts and the transaction result will be printed on the thermal printer or displayed on the phone's screen if no printer is available.

### eFresh Mobile Security

The application uses an assigned merchant and terminal ID as well as a password. The communications are encrypted using HTTPS protocol over the internet using the phone's GPRS connection.

### Bluetooth Printers

eFresh Mobile can be configured to work with any battery operated mobile printers for street vendors and taxi drivers or desktop printers for normal stores.
